

ARE YOU CREATIVE?

Truss Designing is about:-

- combining your current education with industry
- training to create truss and frame designs and structures,
- being a part of your community - actually seeing buildings erected that you have designed,
- letting your imagination be the limit for designing complex building structures and working them through to completion.

DO YOU WANT A CAREER THAT GIVES YOU SATISFACTION?

Working in this industry allows you to:-

- be part of a motivated, professional yet friendly working environment,
- have rewarding remuneration for quality work and demonstrated job skills,
- benefit from a different challenge - everyday - by designing different house styles and working with different builders,
- become qualified in a wide range of positions within the one industry,
- have a lifetime learning experience.

Your Multinail Truss Fabricator:

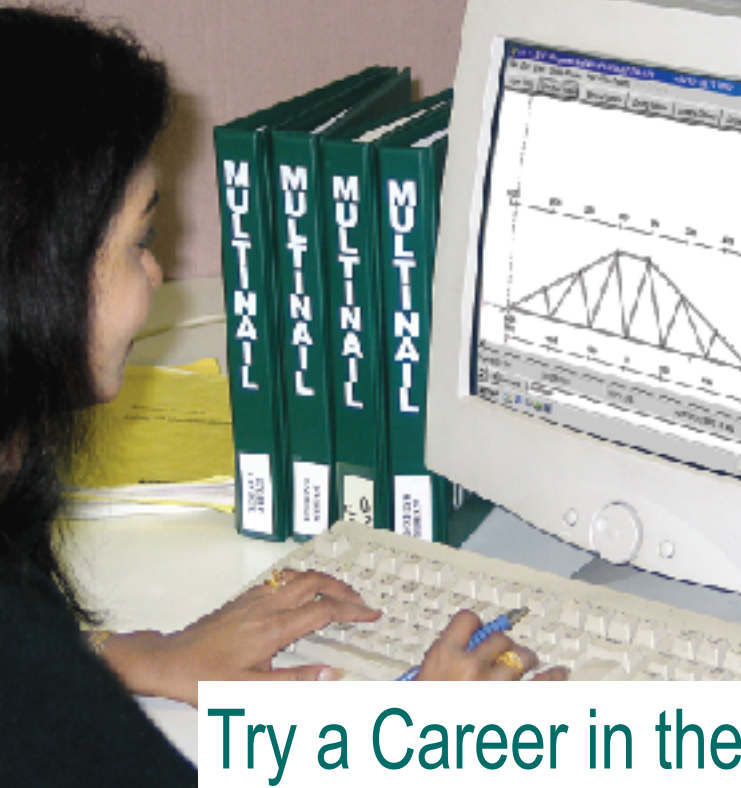

Multinail Australia Pty Ltd is proudly

THE FRAME & TRUSS INDUSTRY

Multinail assists manufacturers of timber roof trusses, wall frames and floor trusses by supplying and servicing them with the Metal Connectors, Machinery, Software and Engineering Support to enable Fabricators to accurately design and manufacture pre-fabricated timber components.

Truss and Frame Fabrication is a rapidly growing industry and is an integral part of building construction methodology.

Our industry is growing so fast that skilled truss designers are in short supply.

Opportunities exist to develop your own position and direction within the industry.

DO YOU LIKE VARIETY?

Have a professional position that allows you to:-

- gain construction experience,
- work with industry professionals such as architects, engineers, building contractors, local authorities, etc.
- gain exposure to different sections within the building industry.

INTERESTED IN LATEST TECHNOLOGY?

Have a work environment that allows you to :-

- be one of a select few in this field,
- use engineering, CAD and design software to design domestic and commercial buildings,
- visualise and also utilise your mathematical skills to develop 3-D software models to produce building designs.
